AMERICAN STRENGTH  
**POWER SQUAT**

**PL-PWR-SQT**

The **American Strength Power Squat** combines biomechanical precision, power, and comfort to deliver a world-class lower-body training experience. Engineered for elite performance, it features a precision pivot mechanism for optimal body alignment, and a counterbalanced start position that accommodates users of all levels. The large, adjustable three-position footplate supports multiple squat variations with deep stretch emphasis, while dual-purpose shoulder pads and a patented lumbar pad ensure proper support and spinal integrity throughout each rep. With stainless steel grips, dual safety stops, and a heavy-duty frame, this machine is built for relentless strength sessions and long-term commercial use.

**KEY FEATURES**

- Precision pivot mechanism for natural squat motion and body alignment.
- Counterbalanced for a smooth, controlled start weight.
- Dual-purpose shoulder pads and patented lumbar pad for superior comfort.
- Large adjustable three-position footplate for varied stance training and maximum stretch on the target muscles.
- Stainless steel grips and dual-position safety stop for control and confidence.
- Ideal for building quads, glutes, hamstrings, and posterior chain strength.
- Heavy-gauge steel construction with a durable powder-coated finish.

AMERICAN STRENGTH  
**HACK SQUAT**

**PL-LIN-HCKSQT**

The American Strength Hack Squat is designed for serious strength training with smooth, controlled motion and optimal biomechanical alignment. Its rotating back pad allows for both standard and seated squats, while the large, four-position adjustable footplate enables precise targeting of the quads, glutes, and hamstrings with a deep stretch. Featuring a patented lumbar pad for enhanced back support and adjustable safety handles for added confidence, this machine is built for performance and protection. With integrated band pegs for variable resistance and stainless-steel plate holders for ample loading, the Hack Squat delivers professional-grade results for athletes and facilities demanding the best.

**KEY FEATURES**

- Ideal for standard and seated hack squats, power and hypertrophy training.
- Rotating back pad supports multiple squat positions with a deep stretch emphasis.
- Large adjustable four-position footplate for targeted lower-body work.
- Patented lumbar pad provides superior spinal support.
- Adjustable and auto-release safety handles for secure operation.
- Band pegs for added or reduced resistance options.
- Four stainless steel plate holders for convenient storage.
- Heavy-gauge steel construction with a durable powder-coated finish.

LOWER BODY  
STRENGTH SERIES

AMERICAN STRENGTH  
**LEG PRESS**

**PL-LEGPRSS-V2**

The American Strength Leg Press is built for serious strength development, combining biomechanical precision with unmatched durability and deep stretch on the target muscles. Designed for comfort and control, it features a patented lumbar pad for superior back support and a six-position adjustable footplate to target multiple muscle groups. The adjustable back pad ensures an optimal training angle, while the walk-through design allows for easy entry and exit. With stainless steel multi-grip handles and plate holders for ample loading capacity, this commercial-grade leg press delivers smooth performance, stability, and the power to push limits.

**KEY FEATURES**

- Ideal for quad, glute, calf, and hamstring development.
- Large six-position adjustable footplate for varied movement patterns and deep stretch on the target muscles.
- Patented lumbar pad provides enhanced lower back support.
- Adjustable back pad for customized positioning.
- Walk-through design allows easy access and safety.
- Stainless steel multi-grip handle for added control.
- Four stainless steel plate holders for convenient weight storage.
- Heavy-duty steel construction with premium powder-coated finish.

AMERICAN STRENGTH  
**VERTICAL  
LEG PRESS**

**PL-VERT-LEGRSS**

The American Strength Vertical Leg Press delivers uncompromising power and precision in a compact, space-efficient design. Engineered for maximum lower-body development, it provides a true vertical press path that isolates the quads, glutes, and hamstrings while minimizing spinal load. A large three-position adjustable footplate allows users to vary stance and muscle engagement, and the adjustable head pad offers incline, flat, or decline positioning for total comfort. With band pegs for progressive resistance, stainless steel plate holders, and an auto-release safety arm, this machine combines safety, versatility, and commercial-grade durability in one sleek package.

**KEY FEATURES**

- Vertical press path for optimal quad, glute, and hamstring activation.
- Large adjustable footplate with three training positions.
- Adjustable head pad with incline, flat, and decline settings.
- Rubber band pegs for variable resistance training.
- Stainless multi-grip handle for control and stability.
- Auto-release safety arm for smooth operation.
- Four stainless steel plate holders for easy weight access.
- Heavy-duty steel frame with durable powder-coated finish.

AMERICAN STRENGTH

# BELT SQUAT

PL-BLTSQT

The American Strength Belt Squat is engineered for unmatched lower-body training without spinal loading. Designed to build strength and power through the quads, glutes, and hamstrings, it delivers the benefits of squatting with reduced stress on the back and shoulders. The adjustable footplate offers flat, incline, and decline options for varied muscle activation and deep stretch, while the fully knurled handlebar and auto-release mechanism provide control and safety during every rep. With band pegs for variable resistance and a heavy-gauge steel frame, this Belt Squat stands up to the most demanding commercial environments.

KEY FEATURES

- Ideal for belt squats, lunges, and lower-body accessory movements.
- Reduces spinal loading while maximizing leg and glute engagement.
- Adjustable footplate with flat, incline, and decline positions, while allowing for a deep stretch in the target muscles.
- Auto-release handle for smooth operation and added safety.
- Fully knurled handlebar for secure grip.
- Integrated band pegs for progressive resistance.
- Anti-slip footplate for enhanced stability.
- Heavy-duty construction for commercial use.

AMERICAN STRENGTH

# SEATED CALF RAISE

PL-ST-CLF

The American Strength Seated Calf Raise is built for peak performance and precision isolation of the lower legs. Designed to deliver a smooth and natural motion, it effectively targets the soleus and gastrocnemius muscles for improved strength, stability, and definition. The heavy-duty frame and pivoting movement arm ensure consistent resistance and a controlled range of motion, while the adjustable thigh pad accommodates users of all sizes. With diamond-plated foot platforms for stability and stainless-steel handles for comfort and durability, this commercial-grade piece is made to stand up to years of high-volume use.

KEY FEATURES

- Targets the soleus and gastrocnemius for lower leg development.
- Adjustable thigh pad for user comfort and fit.
- Smooth pivoting resistance for controlled motion.
- Diamond-plated foot platform for secure positioning.
- Stainless steel handles for comfort and longevity.
- Compact, heavy-duty design ideal for commercial gyms and training facilities.

AMERICAN STRENGTH

# STANDING LEG CURL

PL-ST-LG-CRL

The American Strength Standing Leg Curl is built to hammer hamstrings with clean mechanics, hard contractions, and zero wasted reps. Designed for controlled knee flexion and consistent tension through the full range, it delivers a smooth, powerful curl pattern that supports strength development, hypertrophy, and athletic posterior chain training.

Adjustable positioning and secure contact points keep athletes locked in, while the heavy-duty frame stays planted under real loading and high-volume use. When it's time to build stronger hamstrings and protect the knees, this is the tool.

KEY FEATURES

- Targeted hamstring isolation for strength, hypertrophy, and posterior chain development.
- Smooth, controlled resistance path for consistent tension and clean reps.
- Adjustable setup to fit a wide range of athletes and dialing in positioning.
- Secure pads + contact points for locked-in stability and powerful contractions.
- Heavy-duty steel construction engineered for commercial use and daily abuse.
- Built for performance programming: strength blocks, accessory work, and rehab-style control.

AMERICAN STRENGTH

# PREACHER CURL BENCH

PL-PRCHR-CRL

The American Strength Preacher Curl Bench is built for ruthless arm development and clean, controlled reps. Designed to lock the upper arm in place and eliminate momentum, it forces the biceps to do the work, no swinging, no shortcuts. The angled pad supports strict positioning for hard contractions and full-range training, making it ideal for hypertrophy blocks, accessory programming, and strength-focused arm work. With a heavy-duty steel frame and stable base, this bench stays planted under real loading and high-volume sessions. Pure isolation. Pure output.

KEY FEATURES

- Angled preacher pad for strict arm positioning and maximum biceps isolation.
- Eliminates momentum to keep tension where it belongs, on the muscle.
- Stable, heavy-duty frame built for aggressive loading and daily use.
- Ergonomic setup for consistent rep mechanics and clean execution.
- Ideal for hypertrophy + accessory work in strength programs and bodybuilding splits.
- Durable commercial-grade finish designed to hold up in high-traffic gyms.

UPPER BODY  
STRENGTH SERIES

AMERICAN STRENGTH

# ADJUSTABLE BACK EXTENSION

BNCH-BCKEXT-V2

The American Strength Adjustable Back Extension is built to strengthen the posterior chain the right way, controlled, loaded, and repeatable. Designed for hip-hinge mechanics and targeted low-back, glute, and hamstring development, it features an adjustable setup to lock athletes into the correct position and hit full-range reps without compensation. The stable base keeps the unit planted during high-volume training, while integrated foot support and durable padding deliver consistent bracing rep after rep. Whether you're building spinal resilience, reinforcing hinge patterns, or finishing a strength session with accessory work, this piece is pure output for the backside.

KEY FEATURES

- Adjustable positioning to dial in proper hip-hinge mechanics and athlete fit.
- Targets posterior chain: lower back, glutes, and hamstrings with controlled loading.
- Stable, heavy-duty frame built for aggressive training and daily commercial use.
- Secure foot platform + ankle rollers for strong bracing and consistent execution.
- High-density padding for support without instability during high-rep volume.
- Ideal for strength, rehab-style control, and accessory programming to build durability and power.
- Commercial-grade durability engineered for high-traffic training floors.

AMERICAN STRENGTH

# MULTI MIDDLE CHEST

PL-MM-CHST-FLY

The American Strength Multi Middle Chest is engineered for strength, stability, and precise pressing mechanics. Designed to deliver the perfect mid-range chest press, it offers an ideal movement path that enhances deep stretch muscle engagement while minimizing shoulder strain. The adjustable seat and back pad ensure optimal alignment for users of all sizes, while stainless steel grips and a wide pressing arc create a smooth, natural motion. Built for durability and consistent performance, the Multi Middle Chest is an essential addition to any commercial facility or performance training center focused on balanced upper-body development.

KEY FEATURES

- Ideal for lower, mid-range, and upper chest press and pectoral development.
- Biomechanically aligned pressing arms for smooth, natural motion and deep stretch emphasis on the target muscles.
- Adjustable seat and back pad for user comfort and alignment.
- Stainless steel grips for control and longevity.
- Durable construction with high-grade upholstery and powder-coated frame.
- Compact design optimized for commercial and performance training spaces.

AMERICAN STRENGTH

# T-BAR ROW

PL-T-BAR-RW

The American Strength T-Bar Row is built to deliver powerful, controlled back training with unmatched stability, and ergonomic precision and a deep stretch emphasis on target muscle groups. Designed to maximize upper and mid-back engagement, it features a wide diamond-plated foot platform for secure footing and a smooth pivot point for consistent resistance throughout the range of motion. The angled chest pad supports proper body positioning and minimizes lower-back strain, allowing for intense and effective training sessions. Constructed from heavy-gauge steel with stainless steel grip handles, this T-Bar Row is made for serious lifters and commercial environments demanding durability and performance.

KEY FEATURES

- Ideal for building strength and size in the lats, traps, and rhomboids, while allowing for a deep stretch in the target muscles.
- Angled chest pad for comfort and spinal alignment.
- Diamond-plated platform for stable foot positioning.
- Precision pivot for smooth, consistent resistance.
- Stainless steel multi-grip handles for varied hand positions.
- Heavy-duty construction with a durable powder-coated finish.
- Compact footprint ideal for commercial gyms and performance facilities.

# LAT PULL-DOWN

PL-PULLDOWN-B

The **Flight Series Plate Loaded Lat Pull-Down** by American Strength is a robust and biomechanically sound machine designed for compound training – primarily targeting the lats while also engaging the biceps, forearms, and middle back. With multiple grip positions, it allows lifters to alternate between traditional overhand (pronated) pulls and underhand (supinated) pulls for increased bicep emphasis.

Single-arm mechanics enable maximum muscle isolation and activation. The easy and tactile seat adjustment ensures users can quickly and safely find their ideal position. Finished in classic Matte Black, it delivers long-lasting durability and timeless aesthetics.

KEY FEATURES

- Multiple grip positions for varied lat and bicep emphasis, including pronated and supinated pulls.
- Single-arm mechanics for enhanced muscle isolation and back activation.
- Easy, tactile seat adjustment for quick and safe positioning.
- Classic Matte Black finish for durability and timeless appeal.
- 11 & 8-gauge steel construction with stainless steel weight pegs for long-term performance.
- Supports up to 450 lb (204 kg) weight load with 600+ lb (275+ kg) storage capacity across 4 pegs.
- Grip diameter of 1.25" (32 mm).

AMERICAN STRENGTH

# LOW ROW

PL-LOWROW-B

The **Flight Series Plate Loaded Low Row** by American Strength is a robust and biomechanically optimized machine designed as an effective alternative to traditional dumbbell and seated row variations. Featuring an ideal pulling angle and multiple grip options, it allows for varied degrees of rowing emphasis. Single-arm mechanics maximize muscle isolation and activation, while the easy and tactile seat adjustment ensures quick and secure setup. Finished in classic Matte Black, it offers long-lasting durability and a timeless aesthetic.

KEY FEATURES

- Multiple grip positions for varied rowing angles and muscle emphasis.
- Single-arm mechanics for enhanced muscle isolation and full back activation.
- Easy, tactile seat adjustment for fast and safe positioning.
- Classic Matte Black finish for durability and a clean, modern design.
- 11 & 8-gauge steel construction with stainless steel storage pegs.
- Supports up to 992 lb (450 kg) maximum load with 600+ lb (275+ kg) storage capacity across 4 pegs.
- Grip diameter of 1.25" (32 mm).

# HIP THRUSTER

PL-HIPTHR-V2

The American Strength Hip Thruster is engineered for explosive glute training and total lower-body development. Built for strength, safety, and versatility, it features a stable raised foot platform, oversized support pad, and an adjustable head pad for proper positioning and comfort. Rubber band pegs allow variable resistance for progressive loading, while the auto-release safety arm ensures smooth transitions during training. Designed for commercial performance and durability, this Hip Thruster is the ultimate tool for glute bridges, hip thrusts, and advanced posterior chain work.

KEY FEATURES

- Ideal for hip thrusts, glute bridges, and posterior chain strengthening, while allowing for a deep stretch in the target muscles.
- Oversized support pad with adjustable headrest for comfort and alignment.
- Raised diamond plate foot platform for secure positioning.
- Integrated band pegs for accommodating or adding resistance.
- Auto-release safety arm for efficient setup and movement.
- Heavy-duty steel construction built for commercial use.
- Durable powder-coated finish resists wear and corrosion.

GLUTE & POSTERIOR  
CHAIN SERIES

AMERICAN STRENGTH

# STANDING HIP THRUSTER

PL-ST-HP-THRST

The American Strength Standing Hip Thruster brings power and precision to glute and posterior chain training. Designed for controlled, standing hip thrust movements, it targets the glutes, hamstrings, and hips through a natural, upright range of motion, and with a deep stretch in the target muscles. The fully knurled handlebar ensures a secure grip, while band pegs allow for progressive resistance. Its anti-slip footplate and heavy-gauge steel construction provide unmatched stability, and built-in transport wheels make movement effortless. This compact, commercial-grade machine delivers a powerful new way to train strength, stability, and symmetry.

KEY FEATURES

- Ideal for standing hip thrusts, glute activation, and lower body strengthening, while allowing for a deep stretch in the target muscles.
- Fully knurled handlebar for secure grip and control.
- Band pegs for adding or reducing resistance.
- Anti-slip diamond footplate for safety and stability.
- Heavy-duty steel frame built for commercial environments.
- Wheels on frame for easy portability.
- Durable powder-coated finish resists impact and wear.

AMERICAN STRENGTH

# PENDULUM KICK BACK

The American Strength Pendulum Kick Back is engineered for precision glute and hamstring engagement with unmatched control and deep stretch on the target muscles. Its pendulum-style movement delivers smooth, natural resistance throughout the range of motion, maximizing muscle activation while minimizing joint strain. The adjustable knee pad and range of motion settings accommodate users of all sizes, while band pegs offer variable resistance for progressive training. With a fully knurled handlebar for grip and a counterbalanced design for proper starting weight, this machine combines performance, comfort, and durability for serious strength development.

KEY FEATURES

- Ideal for glute kickbacks, hip extensions, and hamstring activation.
- Pendulum movement provides smooth, controlled resistance, while allowing for a deep stretch in the target muscles.
- Adjustable knee pad and motion range for personalized fit and comfort.
- Counterbalance ensures proper start weight and natural feel.
- Integrated band pegs for resistance customization.
- Fully knurled handlebar for stability and control.
- Heavy-duty construction built for commercial environments.

AMERICAN STRENGTH

# FROG GLUTE PUMP

PL-FRG-PRSS

The American Strength Frog Glute Pump is engineered to deliver deep glute activation and full-range posterior chain engagement. Designed with an angled frame for optimal biomechanics, it promotes natural movement, maximum stretch and consistent tension throughout every rep. Adjustable range of motion and foot bar settings allow users to customize positioning for comfort and performance, while band pegs enable variable resistance for progressive overload. Built for commercial-grade use, the Frog Pump combines ergonomic precision with the rugged durability American Strength is known for.

KEY FEATURES

- Ideal for glute pumps, hip extensions, and posterior chain activation.
- Angled frame design enhances range of motion, deep stretch and muscle engagement.
- Adjustable foot bar accommodates different user heights.
- Range of motion adjustment for safe entry and exit.
- Rubber band pegs for variable resistance training.
